

Mid Seat cone

Blocking the mid seat is an important measure to keep safety on board during COVID-19. To make sure the mid seat is not used by pax, the seat needs to be identified. A mid-seat cone avoids customers to use the seat. During boarding the blocking needs to be visible to avoid questions to cabin crew that extends the boarding duration.

High quality
seam and letters

Product features

- Removable cone to block seats due to mid-seat-free philosophy or seat damages
- Easy installation by VelCro
- Storage in overhead bins possible
- Weight is 0,48 kg per each
- Material, color and labeling can be customized
- Labeling can be done by embroidery or print with logos etc.
- All materials used are cabin qualified materials according to FAR/JAR Part 25 (EASA CS.25.853)
- Cone can be used on each seat needed to be blocked by various reasons

Benefits

- ✓ Less workload for cabin crew during boarding process
- ✓ Reduction of lead-time during boarding of the aircraft
- ✓ Material with EASA Form 1 and EO/SB possible
- ✓ Any customization options possible in form, color, material etc.
